CITY OF SPRINGFIELD  
INTEROFFICE MEMORANDUM

TO: Randy Lyman

DATE: May 22, 1992

SUBJECT: Sunbelt Industrial Services  
=====

This memo is to confirm our phone conversation of May 20, 1992 concerning Deborah Paulsen's (Sunbelt Industrial Services) request to discharge to the POTW groundwater from tank removal operations located at 3121 East Sunshine, Springfield, Mo.

After reviewing the results of the analysis of the water and finding no violations of Chapter 30 limitations for the Southwest Treatment Plant I advised Ms. Paulson that she may proceed with the discharge of the waters to the POTW at the Southwest Treatment Plant. An estimated 7500 gallons of water is in the excavation.

Please find attached the results of the analysis of this water.

Dear Mr. Lyman:

Please find attached two analysis for water contained in an UST excavation located at 3121 East Sunshine.

The first analysis, dated May 5, 1992, was collected from a monitoring well in the tank pit. Phased product was floating on the water and the laboratory was unable to remove enough of the product to get an accurate flash point or oil and grease analysis.

After we had opened the excavation, a second water sample was collected on May 18, 1992. Analysis for total oil and grease and flash point were run on the sample.

An estimated 7500 gallons of water is in the excavation.

This is a request for treatment of the water at the Southwest Treatment Plant.

Thank you for your considerations. Please call me at 831-5052 if you have any questions.

Sincerely,

Deborah Paulsen, CHMM  
Director of Environmental Services
